Clause 3 — Definition of "Corporate Customer"

① A customer qualifies as a Corporate Customer only if both of the following are met:

1. The organization can submit the corporate-customer qualification documents required under the Credit Control policy.
2. The customer enters into a membership hire-purchase contract for 9 units or more (Contract) in a single order.

② Unit count includes all product categories combined. Products do not need to be the same type.

Example

6 water purifiers + 3 air purifiers = 9 units in total
(Different product types are still counted together, so this meets the Corporate Customer threshold.)

Clause 5 — Installation-site conditions

① The installation site is limited to the place of business, building, or area that the contracting Corporate Customer owns or leases directly. Installation at a location registered in another person's name is not allowed — e.g. an employee's private residence or the office of an affiliated company.

② If paragraph 1 is met, the customer may split installation across multiple sites (see permitted-site examples in [Appendix Table 1]).

③ If after signing it turns out that some sites cannot be installed, and the number of units actually installed falls below 9, request approval under Clause 10 (exception approval). The company reserves the right to inspect readiness and feasibility of the installation area.

④ The contract term follows the membership service terms and conditions.
